Serrapeptase is best taken on an empty stomach (1 hour before or 2 hours after meals). If combined or taken with food, it helps digest the food but does nothing to reverse inflammation. In purchasing Serrapeptase, make sure it is enteric coated so that it will not be broken down and inactivated by stomach acids. In that way, the enzyme can reach the small intestines from where it can be absorbed into the bloodstream and reduce inflammation anywhere in the body. Serrapeptase is best taken on an empty stomach (1 hour before or 2 hours after meals). If combined or taken with food, it helps digest the food but does nothing to reverse inflammation. Why Is Inflammation Important?

Inflammation is the number one reason that an individual consults any health care practitioners: Arthritis, gastritis, colitis, dermatitis, nephritis, neuritis and cystitis are just some of the common inflammatory conditions that bring people to their doctors every day. If the doctor’s diagnosis ends in the four letters, “itis”, by definition, inflammation is involved. There are also numerous diseases or health challenges that you might not think involve inflammation but that are closely linked to it. For example, heart disease, especially coronary artery disease, is thought to be directly associated with inflammation. Inflammation is now considered to be a more important risk factor for heart disease than high cholesterol levels. There are laboratory tests for inflammation that will indicate one’s risk for heart disease. These include ESR, hs (high sensitivity) - CRP (C-Reactive Protein) and fibrinogen. All three tests indicate the presence of inflammation in the body and, if elevated, a higher risk for heart disease. It is also an interesting fact that statin drugs routinely used by the medical profession to lower blood levels of cholesterol are actually anti-inflammatory in their mechanism of action.

Serrapeptase

Serrapeptase is a natural pain control substance plus an excellent alternative to NSAIDS and virtually all-autoimmune diseases. Asthma, diabetes, psoriasis, other skin disorders and irritable bowel syndrome also all involve inflammation. The medical treatments for all these conditions are anti-inflammatory drugs as the main therapy. Sports injuries (e.g. tendinitis, bursitis) and any muscular-skeletal injury sustained in a motor vehicle accident also all involve inflammation. The medical treatments for all these conditions are anti-inflammatory drugs as the main therapy. Sports injuries (e.g. tendinitis, bursitis) and any muscular-skeletal injury sustained in a motor vehicle accident

Conquer inflammation with Serrapeptase

“An anti-inflammatory, nothing surpasses the ability of Serrapeptase to safely stop inappropriate (sometimes it is needed) inflammation in its tracks. No matter the cause or the location (it even crosses the blood brain barrier), Serrapeptase gets to work stopping the inflammation. If that is not enough, it has the ability to make our body systems (cells, organs, tissues, even the multi-cellular structures of our bodies) may be gaining up the works, particularly mucous and inflammation associated with pain.”

Robert Redfern-Author, “The Miracle Enzyme”

References

For example, if you have osteoarthritis, doctors will prescribe NSAIDS (non-steroidal anti-inflammatory drugs). Osteoarthritis is a life long illness and most people who suffer from it are on NSAIDS for life.

The trouble with this type of treatment is it only addresses the symptoms, doing nothing to address the underlying cause of inflammation. Also, NSAID pain relievers and steroids induce blood loss from the stomach or other areas of the gastrointestinal tract if taken for extended periods of time.

Other drugs prescribed for chronic illnesses like rheumatoid arthritis or lupus are even worse. These drugs suppress your immune system dramatically. Some are chemotherapeutic agents and anti-malarial drugs. These drugs can damage the liver, the bone marrow and other organs. The horrendous side effects of these drugs are sometimes worse than the disease itself.

Immune system suppression is one of the worst ways to treat any type of chronic pain or autoimmune condition. These drugs only treat the symptoms for a short period of time (maybe 5 or 10 years) and by then, the immune system is so depleted, the patient is absolutely dependent on the drugs to continue to fight an inflammatory response that is now completely out of control.

When the immune system is prevented from what it’s naturally designed to do, rebound inflammation occurs as soon as these drugs are no longer available. Once a synthetic drug is stopped, even for a short period, it’s as though someone busted the lock on the door and let an enraged and hungry mob of inflammatory compounds loose in your exhausted, vulnerable body.

The fact that doctors and surgeons continue to treat inflammation with drugs and surgery without even attempting a natural approach first is deplorable. Worse is the fact that many of them still tell their patients that diet has nothing to do with inflammation when there is overwhelming scientific evidence to the contrary.

**Serrapeptase Stronger Than Turmeric and Boswellia for Inflammation!**

If you’ve done any of your own research into natural methods of treating chronic inflammation, you’ve no doubt heard how a hypoallergenic diet and nutritional supplements like fish oil, vitamin D, and herbs like boswellia and turmeric can help fight your inflammation naturally. While these treatments work well in certain individuals, nothing even approaches the natural anti-inflammatory potency of an enzyme called serrapeptase.

Serrapeptase (a.k.a. Serratio Peptidase) is a proteolytic enzyme. It is fibrinolytic, which means it digests excessive amounts of the protein known as fibrin that causes the blood to clot or become sticky. In the concentrated form of a tablet or capsule, serrapeptase acts as an anti-inflammatory and a pain blocker similar to acetylsalicylic acid, ibuprofen and other NSAIDS (non-steroidal anti-inflammatory drugs). It inhibits the release of bradykinin, a substance that induces pain.

Serrapeptase picks up where other herbs and supplements leave off by not only suppressing the pro-inflammatory compounds but **digesting pro-inflammatory tissue!**

Doctors in Europe and Asia have been prescribing this potent enzyme in ever-increasing frequency for just about every form of inflammation for the past 30 years.

Because of its protein-chopping action, serrapeptase helps thin the fluids formed from injury, thus facilitating drainage. This speeds tissue repair and relieves the constant pressure that causes pain.

**Serrapeptase Treats Wide Variety of Chronic Pain Conditions**

Popularized by the late and legendary German internist, Dr. Hans Nieper, this powerful enzyme has been used to treat virtually all degenerative diseases.

**These diseases include:**

- **Cardiovascular Disease** – Plaque in the arteries consists of fat, cholesterol, cellular waste products, calcium and fibrin. This non-living gunk can end up blocking coronary arteries leading to heart attacks. Serrapeptase gradually cleans out your arteries by dissolving plaque, which eliminates the inflammation at the root of plaque formation.

- **Chronic Bronchitis** – This horribly annoying condition involves chronic coughing, heavy sputum (or mucous) production, chest pain and difficulty breathing. Serrapeptase loosens sputum and reduces the frequency of cough and expectoration. Studies indicate that, when antibiotics are used in conjunction with serrapeptase, more antibiotics are delivered to the site of the bronchial infection. This enables the antibiotic to be more effective.

- **Ear, Nose and Throat Discomforts** – If you suffer from chronic ear, nose, and throat complaints, serrapeptase can help you where other allergy and sinus medications have failed. Serrapeptase eases the inflammation associated with chronic allergic response without the side effects of over-the-counter and prescription sinus treatments.

- **Fibrocystic Breast Disease** – Often a forerunner of breast cancer, this condition involves painful swollen breasts, especially premenstrually. Cysts and areas of hardness in the breasts can be quite uncomfortable for most women. Serrapeptase reverses this condition naturally while lowering your breast cancer risk.
• Irritable Bowel Syndrome – Irritable bowel syndrome is a blanket diagnosis liberally used by conventional medical doctors who are unable to figure out the root cause of the chronic abdominal pain and diarrhea their patients live with. Serrapeptase addresses the underlying causes of inflammation, bringing symptoms under control while digesting the dead, inflamed tissue in your colon that could lead to cancer.

• Pain Control – Serrapeptase can be considered to be a natural pain control substance because it blocks the release of pain inducing compounds from the inflamed tissues. It is an excellent alternative to NSAIDS for conditions as wide ranging as tennis elbow to migraine headaches.

• Repetitive Strain Injury (RSI) and Carpal Tunnel Syndrome – These conditions are often treated with surgery but serrapeptase in conjunction with bromelain (another proteolytic enzyme) and vitamin B6 could be used as suitable alternatives.

• Scarring – Scars of all types can be reduced significantly with the use of serrapeptase for 3 or more months. This is because this enzyme dissolves fibrin, a component of scar tissue.

Other Diseases Helped by Serrapeptase
If it’s a disease or condition that involves inflammation or excessive mucous production, serrapeptase helps either reduce the severity or eliminate it entirely. Arthritis, asthma, bronchiectasis, cysts of any kind, DVT (deep vein thrombosis), emphysema, vascular headaches, varicose veins, snoring, prostatitis and an enlarged prostate will all respond well to serrapeptase.

Serrapeptase Heals Chronic Pain Without Stomach Side Effects
Is Serrapeptase safe? On a scale of one to one thousand with one being harmless and 1000 being highly toxic causing death, we have acetylsalicylic acid, ibuprofen and corticosteroids at close to 1000 while serrapeptase is closer to one.

As with most nutritional supplements that are GRAS (generally regarded as safe), any adverse reactions that occur are usually in the mind of the individual using the supplement. Of special interest is the fact that serrapeptase does not interact with any prescription drug or nutritional supplement.

How to Take Serrapeptase
Serrapeptase is best taken on an empty stomach (1 hour before or 2 hours after meals). If combined or taken with food, it helps digest the food but does nothing to reverse inflammation. In purchasing serrapeptase, make sure it is enteric coated so that it will not be broken down and inactivated by stomach acids. In that way, the enzyme can reach the small intestines from where it can be absorbed into the bloodstream and reduce inflammation anywhere in the body.

Serrapeptase is a powerful anti-inflammatory that can help you get the kind of pain relief you need without damaging side effects.

Let the “magic enzyme” help to make your inflammation vanish

Serrapeptase
Enteric Capsules

- An anti-inflammatory to reduce pain
- A natural pain control substance plus an excellent alternative to NSAIDS
- Help to dissolve any dead or non-living tissue

Formulated by Zoltan Rona, MD, MSc

www.tristarnaturals.com
**Serrapeptase**

**Enzymes serratia peptidase**

120 capsules entérosolubles d’origine végétale

Zoltan Rona, MD, MSc

**Formulé par**

Hypromellose, Gomme de gellane. Ne contient pas d’huile de palme.

**Ingrédients de la capsule:**

Farine de riz [E-15] Cellule entière, brun, stéarate de magnésium (source végétale - Palm oil), Ingrédients non médicinaux : Magnesium Stearate (Vegetable source - Palm oil), Ingrédients de la capsule: Hypromellose, Gomme de gellane. Ne contient ajout de gluten, noix, œuf, produit animal, produit latéral, poisson, crustacé, soya, mais, blé ou levure.

**Voir l’étiquette intérieure pour les précautions.**

Formule non irradiée • Bouteille sans BPA

**Usage ou fins recommandés :**

- Aide à réduire les symptômes d’infections ORL tels que la douleur, la quantité de sécrétion, l’incapacité à percevoir l’odeur et la congestion nasale.
- Enzyme mucolytique.

**Dose recommandée :** (Adultes) Prendre une capsule par jour à jeun.

**Ingrédients médicaux :**

Chaque capsule contient :

Serrapeptase (Serratia - [E-15] Cellule entière) ............. 120,000 SU (60 mg)

**Ingrédients non médicaux :**

Farine de riz [E-15] Cellule entière) ............. 120,000 SU (60 mg)

**Serratia Peptidase Enzymes**

120,000 SU

Practitioner Series

NPN 80045740

Formulated by Zoltan Rona, MD, MSc

**Recommended purpose or use:**

Aide à réduire les symptômes tels que la douleur, la quantité de sécrétion, l’incapacité à percevoir l’odeur et la congestion nasale.

**Recommended dose:** (Adultes) Prendre une capsule par jour à jeun.

**Medicinal ingredients:** Each Enteric, non GMO, veggie capsule contains: Serratia Peptidase (Serratia [E-15] whole cell) ............. 120,000 SU (60 mg)

**Non-medicinal ingredients:** Brown Rice Flour, Magnesium Stearate (Vegetable source - Palm oil), Capsule ingredients: Hypromellose, Gellan gum. Contains no added gluten, nuts, eggs, animal products, dairy products, fish, shellfish, soy, corn, wheat or yeast.

**Cautions and warnings:**

- Do not use if you have heart or blood vessel problems, high blood pressure, kidney or liver disorder, a bleeding disorder, or haemorrhoids.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.

**Known adverse reactions:**

- Help to reduce (symptoms such as) pain, quantity of secretion, inability to perceive smell and stuffy nose from ear, nose and throat infections.
- Mucolytic enzyme.

**Recommended dose:** (Adults) Take one capsule per day on an empty stomach.

**Non irradiated formula • BPA Free Bottle**

Sealed for your protection. Do not use if seal is broken or missing. For freshness store in a cool, dry place. Do not store above 25 °C. Keep out of reach of children.

**Recommended purpose or use:**

Aide à réduire les symptômes d’infections ORL tels que la douleur, la quantité de sécrétion, l’incapacité à percevoir l’odeur et la congestion nasale.

**Recommended dose:** (Adultes) Prendre une capsule par jour à jeun.

**Medicinal ingredients:** Each Enteric, non GMO, veggie capsule contains: Serratia Peptidase (Serratia [E-15] whole cell) ............. 120,000 SU (60 mg)

**Non-medicinal ingredients:** Brown Rice Flour, Magnesium Stearate (Vegetable source - Palm oil), Capsule ingredients: Hypromellose, Gellan gum. Contains no added gluten, nuts, eggs, animal products, dairy products, fish, shellfish, soy, corn, wheat or yeast.

**Cautions and warnings:**

- Do not use if you have heart or blood vessel problems, high blood pressure, kidney or liver disorder, a bleeding disorder, or haemorrhoids.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.
- Do not use if you have persistent swelling, have had major trauma, consult a health care practitioner prior to use.

**Known adverse reactions:**

- Stop using and consult a health care practitioner if the following symptoms appear: dizziness, headaches, difficulty breathing, hypersensitivity reaction, rash or severe allergy.
